PROFESSIONAL SUMMARY

Recent Informatics Engineering graduate with hands-on experience in web and mobile application development. Experienced in building native Android applications and web-based systems, including AI-integrated features. Interested in developing scalable, efficient, and data-driven software solutions.

AREAS OF EXPERTISE

Mobile Development - AI Integration - Database Management - Web Development - REST API Development - Internet of Things

WORK EXPERIENCE

PT Herbatech Innopharma Industry | Full Stack Web Developer Intern 10 March 2026 – 31 March 2026

PHP, Laravel, JavaScript, MySQL, Tailwind CSS, Git

- Developed an ERP system to digitalize GMP operations and securely manage manufacturing data.
- Built a responsive UI to help internal teams monitor data and generate reports efficiently.
- Developed a web-based Purchase Request system to streamline the submission, approval, and management of purchase requests in a structured and efficient manner.
- Developed a web-based meeting management system to organize meeting schedules, agendas, participants, and documentation in a structured and efficient manner.

PT Imersa Solusi Teknologi, Remote | Android Developer Intern July 2025 – 31 August 2025

Kotlin, Android Studio, Firebase, Git

- Developed a native Android marketplace application using Kotlin to facilitate transactions between buyers and sellers.
- Implemented the MVVM architecture and integrated Firebase for user authentication and real-time data management.
- Designed dynamic XML layouts to optimize the shopping cart, product management, and order tracking features.

Vocational Internship – SMP N 1 Padamara May – June 2020

- Repaired and maintained LAN/WAN networks to ensure stable and reliable connectivity.
- Installed and configured computers, including operating systems, software, and peripheral devices.
- Installed and organized network setups to support operational activities.
- Collaborated with technicians and relevant personnel on installation, maintenance, and troubleshooting to ensure smooth and effective operations.

Vocational Internship – Nafi Komputer February – April 2020

- Installed and configured computers, including operating systems, software, and peripheral devices, according to requirements.
- Repaired and maintained computers, resolving various hardware and software issues.
- Collaborated with technicians and relevant personnel on device installation, repair, and maintenance to ensure smooth and effective operations.

PROJECTS

Meeting Management System | PT Herbatech Innopharma Industri

- Developed and implemented a web-based meeting management system to digitalize meeting administration and improve coordination efficiency.
- Developed features for managing meeting schedules, agendas, participants, and meeting information in a structured manner.
- Built a responsive, user-friendly interface to help users manage and monitor meeting activities.
- Performed testing and debugging to ensure all features functioned correctly and met system requirements.

Purchase Request Management System | PT Herbatech Innopharma Industri

- Developed a web-based Purchase Request system to digitalize the submission and management of purchase requests.
- Implemented Purchase Request submission and approval workflows to improve procurement efficiency and transparency.
- Developed features for managing request data, users, and submission statuses in a structured manner.
- Designed a responsive, user-friendly interface for creating, monitoring, and managing Purchase Requests.

Warehouse Management System | Personal Project

- Built a web-based warehouse management system using PHP/Laravel to manage stock data, incoming and outgoing goods, and storage locations.
- Developed inventory recording features to make stock tracking more structured and easier to monitor.

Warungku POS & Inventory | Personal Project

- Developed a web-based Point of Sale (POS) and inventory management application for small shops and businesses using TanStack Start (React), Drizzle ORM, and Tailwind CSS.
- Designed the database schema and transaction flow to support efficient recording of sales and stock.

Warungku Mobile | Personal Project

- Developed a companion mobile application for shop management using React Native (Expo) and TypeScript.
- Enabled mobile access to transaction recording and business monitoring features.

Warungku Katalon Testing | Personal Project

- Automated Web UI and API testing for the WarungKu POS & Inventory application using Katalon Studio.
- Created and executed positive and negative test cases for the Login, Registration, Product, Stock, and Cashier/POS features.
- Performed API testing by validating requests, responses, status codes, and response data.
- Applied assertions, Object Repository, reusable Test Cases, and Test Suites to improve testing efficiency and consistency.
- Tested cashier business rules, including payment validation, underpayment, successful transactions, transaction confirmation, and stock updates.
- Analyzed test execution results and documented pass/fail outcomes as part of the Quality Assurance process.

Rubber Latex Protection Monitoring Website | Undergraduate Thesis – Telkom University Purwokerto

- Built a web dashboard for an IoT-based system that monitors the condition of latex and bark protection on rubber trees.
- Displayed data processed by a Fuzzy Logic algorithm to keep rubber latex quality at optimal conditions, as part of thesis research (Case Study: Baleraksa Village, Purbalingga Regency).

EDUCATION

Telkom University Purwokerto | Informatics Engineering September 2022 – August 2026

GPA 3.68

- Undergraduate Thesis: An IoT-Based System for Rubber Latex and Bark Protection Using a Fuzzy Logic Algorithm to Maintain Optimal Rubber Latex Quality (Case Study: Baleraksa Village, Purbalingga Regency).

SMK N 1 Kutasari | Computer and Network Engineering

Average score: 87.68

ADDITIONAL INFORMATION

Programming Languages: Kotlin, JavaScript, Python, Dart, PHP, Java
Frameworks & Libraries: Laravel, React, Flutter, Node.js, Express.js, Tailwind CSS, TanStack
Databases: MySQL, PostgreSQL, MongoDB, Firebase, SQLite, Docker
Tools & Platforms: Git, GitHub, Postman, Katalon Studio, Maestro, Figma, Google Cloud Platform, Firebase Console
